

Maintain

Updates are **crucial**, are you *sure* your systems are maintained?

It's crucial that your business develops and maintains a structured plan to ensure that all your systems are being updated regularly and reliably. These updates are crucial to keep your business secure and reduce the risk of becoming a victim of a security breach. Does your plan include governance and reporting to ensure that these updates are happening consistently for all your systems? Even a single missed system could be a potential open door into your business.

Our Guaranteed Maintenance Process

to ensure every system is updated and **none** are missed.

Schedule

We'll work with you to schedule a time to complete regular updates to each component of your infrastructure.

Check

After each scheduled update, we verify every system has been successfully updated and is back online as expected.

Manage Change

We follow strict change management procedures to ensure any new systems are added to automatically to patching routines.

Out of Band Updating

Periodically a critical update will need to be deployed that can't wait. We'll schedule an out of band window with you to get the exploit nullified right away.

Test

Using your test environment and user testing procedures we test updates to ensure there are no surprises.

Report

Your monthly report will show all the details of your system updates as well as other details critical to your business.

Summit Systems specializes in the design, deployment, security, support, and strategic plan of your IT systems.
